

# GAD NIYOGISUBIZO

Software Development Student | Backend & Full-Stack Developer

Rwanda | +250 785 662 308 | offgad200@gmail.com  
GitHub: github.com/niyogado | Portfolio: truepath1.netlify.app

## SUMMARY

Advanced Level Software Development student passionate about practical web, backend, and AI-powered applications. Experienced with Python, JavaScript, Node.js, REST APIs, PostgreSQL, SQLite, AI/LLM integration, and workflow automation. Backend Engineer contributor on AgriFlow, a team project using Bitcoin Lightning Network technology for agricultural payments in Rwanda. Seeking internship and junior software development opportunities.

## EDUCATION

**Collegio Santo Antonio Maria Zaccaria Technical Secondary School** — Advanced Level (A2), Software Development | 2024/2025 – Expected 2026/2027

**GS Karama** — O-Level | 2021/2022 – 2023/2024

**GS Karama** — Primary Education | 2015 – 2020

## PROFESSIONAL DEVELOPMENT

**Ejo Labs Summer Talent Program 2026** — Participant | August 2026 – Present

Structured technology learning, collaboration, and hands-on activities focused on practical software and emerging technology skills.

## TECHNICAL SKILLS

|                       |                                                                        |
|-----------------------|------------------------------------------------------------------------|
| Languages             | Python, JavaScript, HTML, CSS                                          |
| Backend & APIs        | REST API Design & Development, Node.js, Express.js                     |
| AI & Automation       | AI/LLM Integration, n8n Workflow Automation, API Integration, Webhooks |
| Blockchain & Payments | Bitcoin Lightning Network Fundamentals, LND, Polar                     |
| Databases             | PostgreSQL, SQLite, Sequelize ORM                                      |
| Tools                 | Git, GitHub                                                            |

## PROJECTS

### AVIS — Owner & Full-Stack Developer

Python • REST API • AI/LLM Integration

AI-powered platform for professional identities, CV management, work artifacts, AI-driven profile analysis, and shareable role-specific views.

- Built full-stack functionality combining Python REST APIs with AI/LLM integration.
- Developed professional profile and CV management features.
- Implemented AI-driven profile analysis.

### AgriFlow — Backend Engineer

Bitcoin Lightning Network (LND) • Polar • PostgreSQL • SQLite • REST API

Team-built agricultural trading platform connecting farmers and buyers in Rwanda and enabling Lightning-based payment settlement through Mobile Money rails.

- Contributed as Backend Engineer on backend/API functionality.
- Built and worked with REST API endpoints supporting trading workflows.
- Worked with LND and Polar for Lightning payment and settlement functionality.
- Worked with PostgreSQL and SQLite for data management.
- Collaborated on backend, frontend, and payment integration.

### Library API — Owner & Backend Developer

JavaScript • Node.js • REST API

REST API for managing books, members, and borrowing operations.

- Developed backend API functionality with JavaScript and Node.js.
- Designed REST endpoints for library record management.

## **CERTIFICATIONS & TRAINING**

**AI Engineering and Workflow Automation with n8n** — Certificate of Completion

AI engineering, API integration, n8n workflow automation, webhooks, data flow/automation logic, and project implementation.

**Legacy JavaScript Algorithms and Data Structures** — freeCodeCamp

**Legacy Responsive Web Design** — freeCodeCamp

## **STRENGTHS**

Problem Solving • Analytical Thinking • Continuous Learning • Teamwork • Communication • Adaptability

## **LANGUAGES**

**Kinyarwanda:** Native | **English:** Good
